Reading a Paper at the Edges of Its Layout

Lena Ortiz Sami Okafor
lena@unread.example

Abstract

A reader of papers meets the layout where it is least regular, from the head of a column to its foot. This one checks the joins a typesetter leaves behind and the blocks that stand in the way of a sentence.

1 Hyphens

Some checks run both pre- and post-training, and some on first- and second-order terms alike. A multi-
head layout keeps its hyphen, while a sentence broken at its end is joined again. The checks we ran pre-
and post-training agree.

2 Tables

Tables are set apart from the text around them. When a table stands in the middle of a sentence, the reading finishes the sentence first and then announces the table.

Viewer	Words	Lines	Figures
WebKit	98.1	96.0	12
Preview	97.4	95.2	12

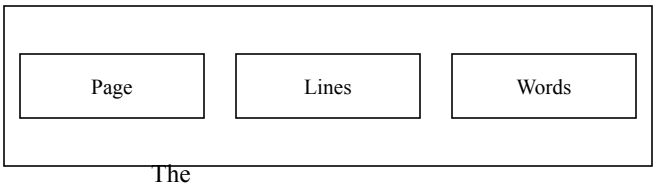

Table 1: Words and lines read whole, per viewer.

A paragraph that starts at the foot of a page

and goes on at the top of the next one is read as one sentence, without the page number.

3 Figures

A page that holds only a figure is announced, and its caption is read whole.

The reader keeps its place on the page

The reader keeps its place
